

Supplementary Video Legend

Video S1. Representative video showing the preparation of the filler solution and its injection technique. The preparation of the injection solution involves the manual dilution of 1.5 ml Radiesse® with 0.4 ml lidocaine 2%, 0.1 ml epinephrine,

and 2 ml saline solution. The solution is then injected (2 ml in each hand) following a modified proximal-to-distal fanning technique, performed at two entry points at the dorsum of the hand.
