

Supplementary file

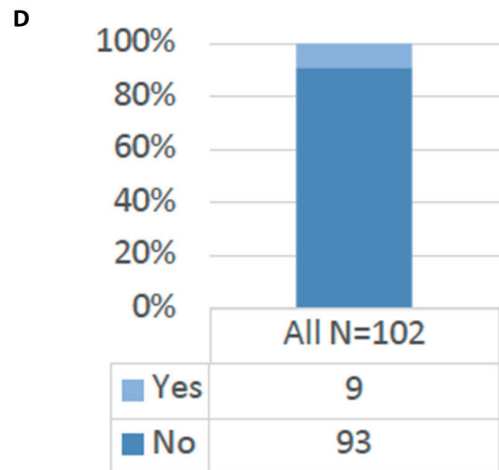

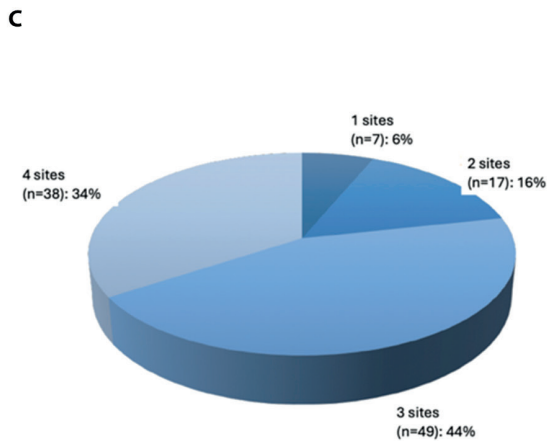

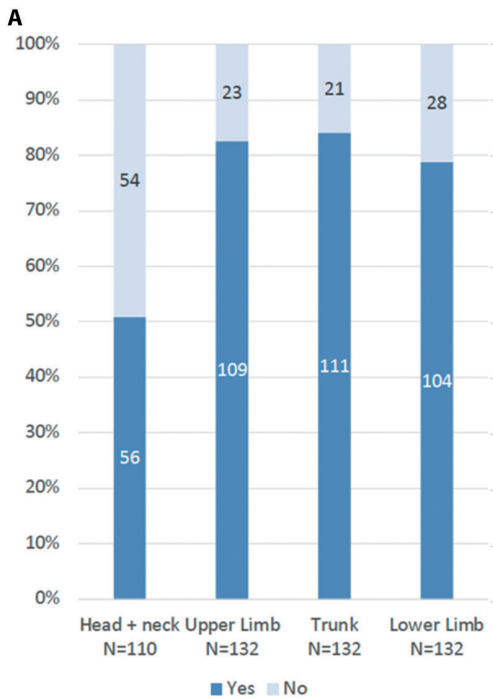

Figure S1. Distribution of psoriatic involvement by body area. (A) Psoriasis involvement was assessed in 110 patients for the head and neck, and in 132 patients for the upper limbs, trunk, and lower limbs. (B) Venn diagram showing the overlap of affected body areas among patients. (C) Number of body areas involved per patient. (D) Palmoplantar involvement.

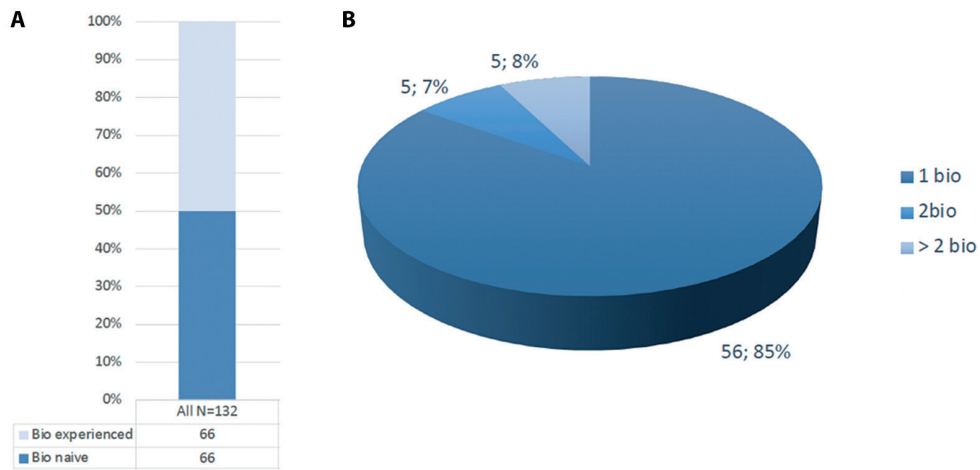

Figure S2. Biologic treatment history of enrolled patients. (A) Bio-naïve vs bio-experienced status among the studied population. (B) Distribution of the number of biologic treatments received prior to bimekizumab.

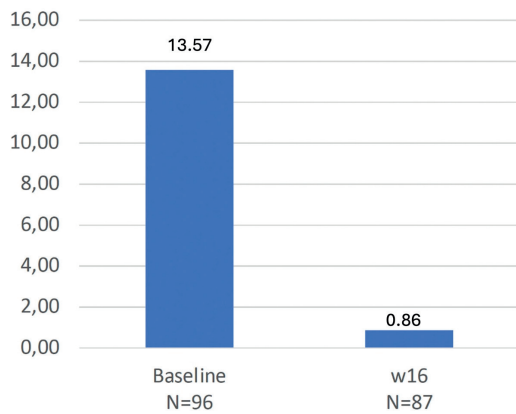

Figure S3. Change in Dermatology Life Quality Index (DLQI) over time.
